

# Self-Closing Braided Cable Wrap

The self-closing braided wrap offers a protective solution for cable breakout areas, allowing easy removal for cable inspection or maintenance. Its open structure facilitates installation after fitting other components like terminals and connectors.

## ADDITIONAL IMAGES

## Product Overview

### Innovative Cable Protection Solution

This self-closing braided wrap is designed for the protection of breakout areas, offering an innovative open structure that allows for effortless installation even after cables are terminated. The material is woven from a combination of polyester monofilaments and multifilaments to ensure a lightweight yet exceptionally tough shield for wire harnesses and hoses. Its inherent flexibility allows it to conform to irregular shapes, providing superior abrasion resistance, noise reduction, and vibration dampening in demanding industrial environments.

## Technical Specifications

Construction Material	Polyester (Monofilament and Multifilament)
Design Features	Self-Closing, Open Structure, Non-Expandable, Flexible, Abrasion Resistant

## Performance

### Protective Capabilities

- Excellent abrasion protection
- Noise reduction
- Vibration dampening
- Chemical resistance
- Temperature stability

## Industrial Applications

### Common Usage Areas

Wire Harnessing • Automatic Equipment • Railways • General Manufacturing
