

Self-Drilling Screw with Indented Hex Washer Head

This self-drilling screw is designed with an indented hex washer head for efficient drilling and fastening. It features a drill point that penetrates materials without pre-drilling and a hex washer head for secure fastening.

Overview

Professional Grade Self-Drilling Screw

This self-drilling screw features an indented hex washer head, engineered for high-efficiency fastening in metal construction and roofing applications. Designed with a specialized drill point, it eliminates the need for pre-drilling, allowing for rapid penetration and secure installation in a single operation. The hex washer head design ensures optimal pressure distribution and a reliable hold for demanding industrial environments.

Technical Specifications

Head Style	Indented Hex Washer Head
Installation	Self-Drilling

Applications

Recommended Applications	Metal Construction, Roofing, General Fastening
--------------------------	--

Performance Features

Key Advantages

- Eliminates pre-drilling requirements
- Single-operation installation
- Secure pressure distribution
- High-efficiency drill point
