

Self-Drilling Screws

These self-drilling screws are designed for efficient and secure fastening. They are available in stainless steel and feature a drill point that eliminates the need for pre-drilling.

Product Overview

Professional Self-Drilling Screws

These self-drilling screws are engineered for high-efficiency fastening across metal, wood, and plastic substrates. Featuring an integrated drill point, these screws eliminate the requirement for pre-drilling, significantly reducing assembly time and labor costs. Crafted from durable stainless steel, they provide superior holding power and reliable, long-lasting performance for industrial and construction applications.

Technical Specifications

Material Composition

Stainless Steel

Available Head Styles

- Hex Washer Head
- Pan Head
- Flat Head

Compatible Materials

Metal, Wood, Plastic
