

Self-Drilling Stainless Steel Screws

These stainless steel screws are self-drilling for easy installation. They are suitable for use in metal, wood and other materials.

Product Overview

Professional Self-Drilling Solutions

These high-quality stainless steel self-drilling screws are engineered for efficient and secure fastening across diverse industrial applications. Featuring a specialized drill point, they eliminate the need for pre-drilling, significantly reducing labor time and effort during installation. Constructed from durable stainless steel, these fasteners provide excellent corrosion resistance and long-term reliability in metal and wood assemblies.

Certifications

ISO 9001, ISO 9001:2008, ISO 9001:2000, BV, SGS, ROHS

Technical Details

Key Features

- Integrated drill point for pre-drilling elimination
- Corrosion-resistant material
- High durability construction
- Versatile application for metal and wood

Available Variants

- Various sizes
- Multiple head styles

Material

Stainless Steel
