

# Self-Feed Wood Drill Bit

This self-feed drill bit is designed for creating clean and accurate holes in wood. It features a lead screw that pulls the bit through the material, reducing the effort required by the user.

## Product Overview

### High-Efficiency Wood Drilling

This self-feed drill bit is expertly engineered from high-carbon 60# steel to ensure durability and longevity. The integrated screw lead point allows for effortless, automatic feeding into the material, significantly reducing physical exertion during heavy-duty tasks. It provides clean, precise hole boring, making it an essential tool for professional-grade woodworking projects.

## Technical Specifications

Material Grade	High Carbon Steel 60#
Suitable Materials	Soft Wood, Hard Wood, Chipboard, Plywood

## Performance Features

### Performance Advantages

- Self-feeding lead screw design for reduced effort
- High carbon steel construction for enhanced wear resistance
- Optimized cutting edges for smooth material removal
- Versatile application across various wood densities
