

Self-Leveling 360° Rotary Laser Level

The self-leveling rotary laser level is designed for accurate horizontal and vertical leveling in construction and surveying. Its rotary function provides 360-degree coverage for large areas and it has a durable housing for protection.

Overview

Professional Rotary Laser Level

This self-leveling 360° rotary laser level is a versatile, high-precision tool engineered for demanding construction and surveying environments. It features automatic self-leveling technology to drastically reduce setup time while ensuring consistent accuracy for both horizontal and vertical applications. Designed for durability and extended range, it is an essential asset for site layout, concrete pouring, and interior alignment tasks.

Key Features

Core Capabilities

- 360-degree rotary coverage
- Automatic self-leveling
- Adjustable rotation speeds
- Compatible with laser detectors
