

Self-Leveling Rotary Laser Level for Construction

This self-leveling rotary laser level is designed for construction and surveying tasks. It features a high-visibility laser beam and robust housing, ensuring accurate measurements in demanding environments.

Product Overview

Professional Rotary Laser Level

This self-leveling rotary laser level is engineered for demanding construction and surveying environments. It features a high-visibility beam and a rotating head that projects a precise laser plane, significantly simplifying alignment tasks. With robust housing and versatile horizontal and vertical leveling capabilities, it is an essential tool for site layout, concrete work, and interior installations.

Technical Specifications

Construction

Robust Housing • High-Visibility Beam

Leveling Mechanism

Automatic Self-Leveling

Operational Modes

Horizontal, Vertical

Applications

Typical Applications

- Site Layout
- Concrete Work
- Interior Installations
- Surveying
