

Self-Lubricating Axial Piston Pump for Seawater Desalination

This self-lubricating axial piston pump is designed for seawater desalination applications. Its compact size delivers high performance, making it suitable for various industrial applications.

Product Overview

High-Efficiency Seawater Desalination Pump

This self-lubricating axial piston pump is engineered specifically for seawater desalination and high-pressure industrial applications. Featuring a robust swashplate design with nine pistons, it offers reliable performance in demanding saline environments. Its compact, oil-free, water-lubricated architecture minimizes maintenance requirements while ensuring consistent and efficient flow.

Technical Specifications

Pump Type	Axial Piston Pump
Design Features	Self-lubricating, Oil-free, Water-lubricated, Swashplate
Number of Pistons	9

Applications

Suitable Applications

- Seawater Desalination
- High-pressure industrial systems
- Firefighting systems
- Foam pumping systems

Model Compatibility

Compatible Series

PAH Series • PAHT Series • PAHF Series • APP Series
