

Self-Priming Automatic Water Pump

This self-priming automatic water pump is designed for efficient and reliable water transfer. It features a robust construction for durability and long-lasting performance.

Product Overview

High-Efficiency Automatic Pump

This self-priming automatic water pump is engineered for reliable performance in water transfer applications. With its robust iron casting construction, brass impeller, and 304-grade stainless steel shaft, it ensures durability and resistance to wear. The integrated 2L tank and stainless steel valve support convenient automatic operation for diverse needs such as irrigation and pressure boosting.

Technical Specifications

Maximum Head

50 m

Max Head

Maximum Flow Rate

2m³/h - 10m³/h

Construction Materials

Material Components

Component	Material
Pump Body	Iron Casting
Impeller	Brass
Shaft	304 Stainless Steel
Valve	Stainless Steel

Features

Key Features

- Self-priming automatic operation
- Includes 2L integrated tank
- Corrosion-resistant components
- Suitable for irrigation and pressure boosting
