

# Self-Priming Booster Pump System

This self-priming booster pump system is engineered to boost water pressure in residential and light commercial environments. The system integrates a centrifugal pump with a pressure tank and pressure switch to ensure automated functionality.

## ADDITIONAL IMAGES

## Overview

### High-Performance Booster System

This self-priming booster pump system is engineered to provide consistent water pressure for residential and light commercial environments. Combining a robust centrifugal pump, a pressure tank, and an automatic pressure switch, the unit ensures seamless operation that responds dynamically to water demand. Built with durable, corrosion-resistant materials and featuring integrated thermal overload protection, this system offers a reliable solution for homes, gardens, and irrigation needs.

## Technical Specifications

### Ideal Applications

- Residential water supply
- Garden irrigation
- Light commercial pressure boosting
- Areas with low water supply

### System Features

Self-Priming, Automatic Operation, Thermal Overload Protection, Corrosion Resistant

## Performance

### System Performance

**1 Automatic**
