

Self-Priming Centrifugal Pump

This self-priming pump is engineered for dependable liquid transfer, even from below-ground sources. The pump's durable construction and accessible components ensure easy installation and maintenance.

Product Overview

Industrial QHS Series Self-Priming Pump

The QHS series self-priming pump is a robust and efficient solution engineered for demanding industrial environments. Constructed with a durable stainless steel housing and a high-performance electric motor, this pump excels in applications involving below-ground liquid transfer or air-present suction lines. Its compact footprint and accessible design ensure simplified installation and long-term maintenance reliability across water treatment and chemical processing sectors.

Technical Specifications

Pump Type

Self-Priming • Centrifugal

Suction Port Diameter

40 mm

Housing Material

Stainless Steel

Applications

Primary Industries

Water Treatment, Chemical Processing, Industrial Liquid Transfer
