

Self-Priming Centrifugal Water Pump

This self-priming centrifugal water pump is designed for irrigation, drainage, and water transfer. It features a robust construction with a cast iron pump housing and impeller for durability and is ideal for agricultural, construction, and general-purpose water pumping needs.

Product Overview

Professional Self-Priming Centrifugal Pump

The PUMP DAG 201 is a robust self-priming centrifugal water pump engineered for reliable performance in demanding environments. Constructed with a durable cast iron housing and impeller, it is perfectly suited for agricultural irrigation, site drainage, and general industrial water transfer. This unit offers consistent flow and efficiency for diverse professional pumping requirements.

Technical Specifications

Model Identifier	DAG 201
Pump Type	Self-priming centrifugal
Construction Material	Cast Iron Housing, Cast Iron Impeller
Power Type	Electric Motor

Applications

Primary Applications

- Agricultural Irrigation
- Water Drainage
- General Water Transfer
- Construction Site Pumping

Installation

Connection Interface	Standard Hose Connection
