

Self-Priming Centrifugal Water Pump

This self-priming centrifugal water pump is designed for pumping clean water in domestic applications. It features a cast iron pump body, a two-pole induction motor, and thermal overload protection.

Overview

Self-Priming Centrifugal Pump

This self-priming centrifugal water pump is designed for efficient water management in domestic and civil applications. It is capable of handling clean water, even when air is present, and is suitable for non-aggressive liquids. Engineered for reliability and low energy consumption, it is an ideal solution for pressure sets, rain water recovery, and irrigation systems.

Technical Features

Fluid Compatibility

- Clean water
- Liquids with air present
- Non-chemically aggressive liquids

Operational Highlights

Self-priming • Quiet Operation • Low Energy Consumption • Continuous Operation • Thermal Overload Protection

Recommended Applications

Domestic Water Supply, Civil Applications, Pressure Boosting, Rain Water Recovery, Irrigation Systems

Construction

Construction Materials

Robust cast iron pump body

Installation

Installation Environment

Must be installed in an enclosed environment or sheltered from inclement weather.
