

Self-Priming Centrifugal Water Pump

This self-priming centrifugal water pump is designed for domestic water supply, irrigation, and pressure boosting. It features corrosion-resistant materials and a motor with thermal overload protection for durability and consistent water pressure.

Overview

High-Efficiency Self-Priming Solution

This self-priming centrifugal water pump is expertly engineered for reliable water supply in domestic, irrigation, and pressure boosting applications. Equipped with an integrated pressure tank, it ensures consistent water pressure while the motor features built-in thermal overload protection for operational safety. Constructed from durable, corrosion-resistant materials, it is ideally suited for extracting water from wells, tanks, and various other sources.

Performance Metrics

Key Performance Indicators

1 Included

Self-Priming Capability

1 Included

Thermal Overload Protection

Application

Primary Applications

Domestic Water Supply, Irrigation, Pressure Boosting, Well Pumping

Technical Specifications

Design Features

- Corrosion-resistant material composition
- Integrated pressure tank for consistent flow
- Designed for various water sources including tanks and wells
