

Self-Priming Electric Water Pump

This self-priming jet pump is designed for water supply and pressure boosting. It is suitable for pumping clean water from wells or tanks and ideal for irrigation and general water transfer needs.

Product Overview

Self-Priming Electric Water Pump

This self-priming jet pump is engineered for reliable water supply and pressure boosting in domestic and civil applications. Designed to handle clean water even when air is present, it offers a quiet and energy-efficient solution for your water distribution needs. Its robust construction makes it ideal for irrigation systems, rainwater recovery, and general-purpose water transfer.

Applications

Recommended Uses

Domestic Water Supply, Pressure Boosting, Irrigation Systems, Rainwater Recovery, Water Distribution

Operational Details

Fluid Compatibility

Clean water; liquids not chemically aggressive to pump materials

Installation

Enclosed environment or sheltered from inclement weather

Features

Key Benefits

- Self-priming capability (handles air in liquid)
- Quiet operation
- High reliability
- Low energy consumption
