

Self-Priming Electric Water Pump

This self-priming water pump features an electric motor coupled with a centrifugal pump mechanism for efficient water transfer. Its compact design and sturdy construction ensure durability and ease of installation, making it suitable for irrigation, water supply, and drainage systems.

Product Overview

Professional Self-Priming Water Pump

This self-priming electric water pump is designed for reliable and efficient water transfer across various industrial and agricultural applications. Featuring a robust electric motor paired with a high-performance centrifugal mechanism, it offers consistent operation for irrigation, municipal water supply, and drainage systems. Its compact, sturdy construction ensures both long-term durability and simplified installation for professional users.

Technical Specifications

Pump Type	Self-priming centrifugal pump
Drive Mechanism	Electric motor driven

Applications

Typical Applications	Irrigation, Water Supply, Drainage Systems
----------------------	--

Build Quality

Construction	Robust, durable housing designed for industrial environments
--------------	--
