

Self-Priming Jet Pump for Water Transfer

This self-priming jet pump is designed for water transfer and boosting applications. Its features include a robust motor, mechanical seal for leak prevention, and an impeller for efficient fluid movement.

Product Overview

High-Efficiency Self-Priming Jet Pump

This self-priming jet pump is engineered for reliable water transfer and pressure boosting applications. Built with a robust motor and high-quality mechanical seal, it ensures consistent performance and leak prevention in both industrial and domestic water systems. Its specialized impeller design promotes efficient fluid movement, making it a dependable solution for demanding hydraulic requirements.

Technical Specifications

Key Components

- Robust Electric Motor
- Leak-Resistant Mechanical Seal
- High-Efficiency Impeller
- Durable Pump Housing

Application Compatibility

Water Transfer, Pressure Boosting, Industrial Systems, Domestic Water Systems
