

Self-Priming Peripheral Water Pump with Pressure Tank

This self-priming peripheral pump is designed for clean water transfer and boosting water pressure. It features a durable construction with a pressure tank, making it suitable for homes, gardens, and small irrigation.

Product Overview

High-Efficiency Self-Priming Solution

This self-priming peripheral water pump is engineered for reliable clean water transfer and pressure boosting. Equipped with an integrated pressure tank, it ensures consistent flow for domestic, garden, and irrigation needs. Its robust construction provides long-term durability and performance for small-scale water supply systems.

Technical Features

Design Features

- Self-priming capability
- Integrated pressure tank
- Durable construction

Pump Type

Self-priming peripheral pump

Suitable Applications

Domestic water supply, Garden irrigation, Pressure boosting, Clean water transfer
