

Self-Priming Peripheral Water Pump with Stainless Steel Body

This self-priming peripheral pump is designed for domestic water supply. It features an INOX stainless steel pump body for corrosion resistance, a pressure tank for maintaining consistent water pressure, and an integrated pressure gauge for monitoring system performance.

Product Overview

High-Performance Self-Priming Solution

This self-priming peripheral water pump is engineered for reliable domestic water supply and pressure boosting. Featuring a robust stainless steel INOX body, the unit offers excellent corrosion resistance for long-term durability. It comes equipped with an integrated pressure tank and gauge, ensuring stable water flow and simplified monitoring for residential, garden, or small irrigation use.

Key Features

Construction and Build

Self-priming, Stainless steel body, Corrosion resistant, Integrated pressure tank, Integrated pressure gauge

Application

Typical Applications

- Domestic water supply
- Water pressure boosting
- Garden irrigation
- Small-scale irrigation systems

Performance

Power Type

Electrically powered
