

Self-Priming Peripheral Water Pump

This self-priming peripheral pump is suitable for clean water and non-aggressive liquid applications. It is designed for domestic water supply, small-scale irrigation, and pressure boosting.

Product Overview

Solar-Powered Water Pumping Solution

The TSQB series solar-powered peripheral water pump is engineered for efficient clean water handling. Designed for versatility, this pump is an excellent choice for domestic water supply, garden irrigation, and small-scale pressure boosting applications. Its compact architecture and robust construction ensure a reliable service life even in demanding outdoor environments.

Technical Specifications

Design Features

- Compact design
- Self-priming capability
- Durable construction
- Solar-ready efficiency

Fluid Compatibility

Non-aggressive liquids • Clean water

Pump Type

Self-priming peripheral pump

Applications

Clean water, Domestic supply, Irrigation, Pressure boosting
