

# Self-Priming Stainless Steel Jet Pump

This self-priming jet pump is designed for water transfer and boosting applications. Its stainless steel body and robust motor ensure reliable performance, making it suitable for domestic water supply and irrigation.

## Overview

### High-Efficiency Jet Pump

The KJ self-priming jet pump is engineered for reliable water transfer and boosting applications. Featuring a durable stainless steel body and a robust motor, this unit ensures consistent performance and longevity in various environments. Its self-priming capability allows for easy startup, making it an ideal solution for domestic water supply, irrigation, and pressure boosting systems.

## Technical Specifications

### Fluid Compatibility

Clean Water

### Construction Material

Stainless Steel

### Model Identifier

KJ-370S

## Key Features

### Performance Benefits

- Self-priming capability for easy startup
- Quiet operation
- Easy installation
- Consistent flow and pressure

### Suitable Applications

Domestic Water Supply, Irrigation, Pressure Boosting
