

Self-Priming Stainless Steel Peripheral Pump

This self-priming peripheral pump is suitable for domestic applications and small-scale irrigation. It features a stainless steel pump body for corrosion resistance and durability.

Product Overview

Compact and Durable Liquid Transfer

This self-priming peripheral pump is engineered for domestic applications and small-scale irrigation requirements. Constructed with a stainless steel body, it offers superior corrosion resistance and long-term durability in varied environments. It is an ideal solution for professionals and end-users looking to boost water pressure, transfer clean liquids, or maintain garden irrigation systems.

Technical Specifications

Key Features

- Self-priming capability
- Corrosion-resistant construction
- Compact design for domestic use

Pump Body Material	Stainless Steel
Primary Applications	Domestic Water Supply, Small-Scale Irrigation, Pressure Boosting, Liquid Transfer, Garden Watering
Compatible Fluids	Clean water
