

Self-Priming Water Jet Pump

This self-priming jet pump is designed for water pumping applications. It features a robust construction with a motor and pump housing, suitable for various water supply and pressure boosting systems.

Product Overview

High-Efficiency Self-Priming Solution

This self-priming jet pump is engineered to provide consistent water flow for residential and commercial supply systems. Its robust design allows it to handle air in the suction line, ensuring reliable operation without the need for manual priming. Built for versatility, it is an ideal component for pressure boosting and general water transfer applications.

Technical Specifications

Pump Type	Self-priming jet pump
Key Applications	Water supply, Pressure boosting

Construction

Construction Features

- Robust motor housing
- Durable pump casing
- Advanced self-priming mechanism
