

Self-Priming Water Jet Pump

Self-priming jet pump designed for water supply and pressure boosting. Features a durable construction with a cast iron pump body and a high-efficiency motor.

Product Overview

High-Efficiency Self-Priming Jet Pump

This self-priming water jet pump is designed for reliable water supply and pressure boosting applications. Built with a robust copper wire motor and copper impeller, it ensures consistent performance for domestic and light industrial water transfer needs. The unit features a compact design suitable for drawing water from wells or tanks, providing a maximum head of 45 meters and a flow rate of 60 liters per minute.

Performance Metrics

Maximum Head

45 m

Max Head

Maximum Flow Rate

60 L/min

Max Flow

Technical Specifications

Input Power	750 W
Rated Voltage	220-240V
Frequency	50 Hz
Maximum Suction	8 m
Pipe Diameter	1" x 1"
Cable Length	0.3 m

Construction & Materials

Motor Material

Copper Wire

Impeller Material

Copper
