

Self-Priming Water Jet Pump

This self-priming jet pump is designed for water supply and boosting applications. It features durable construction, ensuring reliable and efficient water transfer with consistent pressure.

Overview

Self-Priming Jet Pump

This self-priming jet pump is engineered for reliable water supply and boosting applications. It is suitable for both domestic and light industrial environments, offering consistent pressure and efficient water transfer. With a robust 1HP motor, it provides the power necessary to handle demanding fluid management tasks.

Technical Specifications

Input Power	750 W
Horsepower	1 HP
Voltage & Frequency	220-240V~50Hz

Performance Metrics

Key Performance Metrics

51 m

Max Head

55 L/min

Max Flow
