

Self-Priming Water Pump

This self-priming pump efficiently transfers water and boosts pressure. It features a durable cast iron construction for longevity and reliable performance.

Product Overview

High-Efficiency Self-Priming Water Pump

This professional-grade self-priming water pump is engineered for superior reliability in water transfer and pressure boosting applications. Its robust cast iron construction ensures long-term durability in both domestic and industrial environments. The system features a high-performance motor with built-in thermal protection, providing consistent flow rates and safe, maintenance-friendly operation.

Key Features

Capabilities

- Self-priming capability for quick startup
- Corrosion-resistant impeller
- Leak-free mechanical seal
- Thermal overload protection
- Easy-access components for maintenance

Applications

Suitable Environments

Irrigation, Domestic Water Supply, Industrial Processes

Technical Construction

Construction Material

Cast Iron Body
