

Self-Priming Water Pump

This self-priming jet pump is designed for pumping clean water, making it suitable for domestic water supply, small-scale irrigation, and pressure boosting. It is constructed with durable materials, featuring a powerful motor and efficient hydraulic design for reliable water delivery.

Overview

Self-Priming Jet Pump (JSW Series)

The JSW series self-priming jet pump is engineered for efficient water transfer and pressure boosting. Designed specifically for pumping clean water, this unit is an ideal solution for domestic water supply and small-scale irrigation requirements. Its robust construction ensures long-lasting performance, while the powerful motor and optimized hydraulic design provide consistent and reliable water delivery.

Technical Specifications

Pump Type	Self-priming Jet Pump
Primary Applications	Domestic Water Supply, Small-scale Irrigation, Pressure Boosting
Compatible Fluids	Clean water
