

Self-Priming Water Pump

These pumps are suitable for pumping clean water and fluids which are not chemically aggressive. They are extremely reliable, economical, and simple to use.

Overview

High-Performance Self-Priming Solution

The JS series self-priming pump is a robust and efficient pumping solution designed for various applications requiring reliable water transfer. Featuring a durable stainless steel pump body and a powerful electric motor, this pump ensures long-lasting performance and resistance to corrosion. Its self-priming capability allows it to quickly and easily draw water from wells, tanks, or other sources, eliminating the need for manual priming.

Technical Specifications

Pump Type	Self-Priming
Body Material	Stainless Steel

Features

Key Features	Self-Priming, Corrosion Resistant, High Efficiency
--------------	--

Applications

Typical Applications

- Irrigation
- Domestic Water Supply
- Industrial Water Transfer
