

Self-Priming Water Pump

This pump is designed for pumping clear water and fluids that are not chemically aggressive to its components. It is reliable, economical, and simple to operate.

Product Overview

Efficient Water Transfer Solution

This self-priming pump is engineered for reliable water transfer and irrigation tasks. Featuring a durable stainless steel body and a robust electric motor, it is built to withstand demanding environments. Its self-priming capability allows for seamless operation by drawing water directly from shallow wells or tanks without the need for manual priming.

Key Features

Core Capabilities

Self-Priming, Stainless Steel Construction, Electric Motor Driven, No Manual Priming Required

Applications

Suitable Applications

- Agricultural Irrigation
- Domestic Water Supply
- Industrial Water Transfer

Technical Construction

Pump Body Material

Stainless Steel
