

Self-Priming Water Pump for Clean Water Transfer

This self-priming water pump is designed for clean water transfer and pressure boosting. It is suitable for domestic water supply, irrigation, and general water transfer applications.

Product Overview

Clean Water Transfer Solution

This self-priming water pump is engineered for efficient clean water transfer and pressure boosting. It is an ideal solution for domestic water supply, agricultural irrigation, and various general utility applications. Built with a durable motor and an optimized impeller design, this unit ensures reliable performance and longevity in operation.

Technical Features

Installation and Maintenance

- Self-priming functionality
- Designed for easy installation
- Simplified maintenance requirements

Primary Applications

Domestic water supply, Irrigation, General water transfer, Pressure boosting

Design and Build

Build Quality

Durable Motor • Efficient Impeller
