

Self-Priming Water Pump for Irrigation

This self-priming water pump is designed for efficient drainage and irrigation in agricultural applications. It operates effectively even with an intermittent water supply.

Product Overview

High-Efficiency Agricultural Irrigation Pump

This self-priming water pump is engineered specifically for demanding agricultural environments, including irrigation and drainage tasks. Its advanced self-sucking capability ensures consistent operation even when water supplies are intermittent. Built for durability, the pump provides long-term reliability in various water transfer applications.

Technical Specifications

Key Operational Features

- Self-priming capability for intermittent supply
- Robust construction for harsh environments
- High durability for long-term use

Pump Type	Self-priming (Self-sucking)
Primary Applications	Agricultural Irrigation, Drainage, Dewatering, Water Transfer
