

Self-Propelled Telescopic Boom Lift

This is a self-propelled boom lift designed for reaching elevated work areas. It features a telescopic boom, providing extended reach and maneuverability.

Overview

High-Reach Access Solution

This self-propelled telescopic boom lift is engineered for efficient access to elevated work areas in construction, industrial, and maintenance environments. Featuring a robust, maneuverable telescopic boom and a stable chassis with high-traction tires, it provides safe and reliable positioning for personnel at height. It is an ideal choice for tasks such as painting, facility repairs, and complex installations requiring extended reach and mobility.

Key Features

Primary Applications

Construction, Industrial Maintenance, Painting, Facility Repair, Installation

Technical Specifications

Mobility & Stability

- Self-propelled drive system
- Telescopic boom extension
- Robust chassis design
- Large terrain-capable tires

Lift Type

Self-Propelled Telescopic Boom Lift
