

Self-Propelled Vertical Mast Lift

This self-propelled vertical mast lift is designed for indoor use on flat surfaces. It features a compact base for maneuvering in tight spaces, non-marking tires, and a platform for a single operator and is primarily used for maintenance, installation, and stock-picking applications.

Overview

Compact Vertical Access Solution

This self-propelled vertical mast lift is engineered specifically for indoor maintenance, installation, and stock-picking tasks on flat surfaces. Its compact base design allows for exceptional maneuverability in tight, confined spaces where larger equipment cannot operate. Equipped with non-marking tires and a single-operator platform, it provides a safe and efficient solution for elevated work requirements.
