

Self-Propelled Vertical Mast Lift

This is a self-propelled aerial work platform designed for warehouse and maintenance applications. The mobile elevating work platform (MEWP) features a compact design for maneuverability in confined spaces.

Product Overview

Efficient Vertical Access

This self-propelled vertical mast lift is engineered for precision and safety in warehouse and maintenance environments. Its compact footprint allows for seamless maneuverability within confined spaces, making it an ideal solution for indoor tasks on flat surfaces. Equipped with a secure operator platform and robust guardrails, it provides a stable and reliable elevating work platform for various aerial operations.

Design Features

Design Highlights

- Compact design for confined spaces
- Integrated safety cage with guardrails
- Vertical mast lifting mechanism
- Wheels for easy transport and positioning
