

# Self-Propelled Workover Rig

This self-propelled workover rig is designed for well servicing and workover operations. It features a telescoping mast and a powerful drawworks system for handling drill pipe and casing.

## Overview

### Professional Self-Propelled Workover Rig

This self-propelled workover rig is engineered for demanding well servicing and maintenance operations in field conditions. Featuring a robust, multi-axle chassis for optimal stability and a high-capacity telescoping mast, it ensures reliable access to wellheads. The unit integrates a powerful drawworks system alongside advanced hydraulics to provide precise control and efficient hoisting of downhole equipment.

## Performance Specifications

Maximum Working Depth	3500 m
-----------------------	--------

## Technical Features

Key Systems	Self-Propelled, Telescoping Mast, Advanced Hydraulic Control, High-Capacity Draw-works
-------------	--

## Operational Capabilities

### Core Functions

- Well servicing operations
- Workover tasks
- Handling of drill pipe and casing
- Maintenance and repair applications
