

Semi-Automatic BGA Rework Station

This semi-automatic machine features a 2-in-1 hot air heater and mounting head. It offers a large bottom IR heating area and a color optical system with split vision for high cost performance.

Product Overview

Professional BGA Rework Solution

This semi-automatic rework station is engineered for high-precision motherboard repair and component maintenance. It features an integrated hot air heater head and mounting head design for streamlined operation, complemented by a large bottom infrared heating area. With its advanced color optical system and split vision functionality, it provides the accuracy required for complex component tasks.

Technical Features

Heater Configuration	2-in-1 Integrated Hot Air and Mounting Head
Heating Method	Large bottom IR heating area
Optical Alignment	Color optical system with split vision

Compatibility

Supported Components	BGA, LGA, CGA, BHA, QFN, CSP, POP, MLF, MicroSMD
----------------------	--

Performance

Value Proposition

High Cost Performance • Semi-Automatic
