

Semi-Automatic Cylindrical Bottle Labeling Machine

This semi-automatic bottle labeling machine is designed for applying labels to cylindrical containers. It combines manual operation with automated labeling to increase efficiency in small to medium-scale production environments.

Product Overview

Professional Semi-Automatic Labeling Solution

This semi-automatic cylindrical bottle labeling machine is engineered to provide precise, consistent, and efficient label application for various cylindrical containers. Designed for small to medium-scale production environments, it combines robust construction with adjustable components to easily accommodate diverse bottle sizes and label dimensions. The system features a refined labeling mechanism, including a dedicated label roll holder and integrated pressure application, ensuring high-quality results for professional packaging needs.

Technical Specifications

Operation Type

Semi-Automatic

Primary Components

- Label roll holder
- Dispensing unit
- Pressure application system

Suitable Containers

Cylindrical Bottles

Application

Ideal Scale

Small to medium-scale production

Performance

Operational Efficiency

1 Semi-Auto
