

Semi-Automatic Metal Eye Forming Machine

The Semi-Automatic Metal Eye Forming Machine is designed for creating eye shapes in metal components. It utilizes hydraulic systems and precision tooling to ensure consistent and accurate eye formation.

Product Overview

Industrial Eye Forming Solution

The Semi-Automatic Eye Forming Machine is a specialized industrial tool engineered for the precise creation of eye shapes in metal components. Featuring a dual-station configuration, it integrates end cutting and eye forming processes to streamline manufacturing workflows. Designed with a focus on consistency and control, it offers operators a balanced semi-automatic system that maximizes both production speed and component quality.

Technical Configuration

Working Stations

- End cutter station
- Eye forming station

Positioning Capabilities

Central hole positioning, Rear positioning

Optional Add-ons

Available Upgrades

- Half length measure device
- Berlin eye forming device

Performance Features

Operation Mode

Semi-Automatic • Hydraulic
