

Server and Workstation Ventilation Fabric

This high-density fabric is designed for use in server and workstation environments. It provides excellent ventilation and dust filtration, ensuring optimal performance.

Product Overview

High-Performance Ventilation Solution

This high-density ventilation fabric is engineered specifically for server and workstation environments to optimize hardware longevity. Its tightly woven structure provides superior dust filtration while ensuring consistent airflow to electronic components. Designed for demanding applications, the material is highly durable and features a non-reflective dark finish for a professional aesthetic in equipment housings.

Technical Specifications

Material Characteristics

High-density, Durable, Dust-filtering, Non-reflective

Application

Ideal Applications

- Server racks
- Workstation enclosures
- Electronic equipment housings

Performance

Core Benefits

- Optimal ventilation airflow
- Effective dust filtration
- Resistance to wear and tear
- Component protection
