

Service Brake Valve for Air Brake Systems

This service brake valve is designed for use in heavy-duty vehicle air brake systems. It regulates air pressure to control braking force.

Product Overview

Professional Grade Service Brake Valve

This service brake valve is designed for critical reliability in heavy-duty air brake systems. Engineered for high-pressure environments, it features a robust metallic housing and precision-machined connection ports to ensure seamless integration into vehicle air brake circuits. This unit is supplied in new, ready-to-install condition, making it an ideal choice for maintenance and fleet servicing.

Technical Specifications

Construction

- Metallic housing
- Threaded mounting studs
- Multi-port configuration

Condition

New

Component Category

Service Brake Valve

System Compatibility

Air Brake System, Heavy-Duty Vehicle
