

Servo Drive for Industrial Automation

This servo drive is designed for precise motion control in industrial automation. It features advanced control algorithms and integrated safety functions.

Product Overview

Industrial Motion Control Solution

This high-performance servo drive unit is engineered to provide precise motion control across a wide range of industrial automation applications. It incorporates advanced control algorithms to ensure high accuracy, responsiveness, and seamless integration with complex control systems. Designed for demanding environments, this drive supports robust operational requirements.

Compatibility

Compatible Model Series

- MBDHT series
- MADDT series
- MADHT series
- MADKT series
- MBDDT series
- MCDDT series
- MDDDT series

Application Compatibility

Industrial Automation, Motion Control, Precision Manufacturing
