

Servo Driven Injection Molding Machine

This injection molding machine utilizes a high-performance servo motor for enhanced precision and energy savings. It offers an advanced control system to optimize injection parameters and ensure reliable operation for various plastic parts.

Overview

High-Efficiency Servo Injection Molding

The GEKW/S servo energy-saving injection molding machine integrates a high-performance servo motor control system to optimize production efficiency. Designed for precision, this model achieves significant energy and water savings compared to traditional hydraulic injection systems. It offers consistent part quality, minimal cycle times, and an intuitive interface to streamline industrial plastic manufacturing processes.

Key Features

Performance Features

Energy Saving, Water Saving, High Precision Injection, Servo Motor Control, Optimized Hydraulics
