

Sewage Treatment Plant for Water Purification

This comprehensive plant features processing towers, sedimentation basins, and effluent discharge infrastructure. It's constructed with durable materials for long-term reliability and efficient operation.

Product Overview

Professional Sewage Treatment Solution

This comprehensive sewage treatment plant is designed for large-scale water purification and environmental protection. It utilizes a multi-stage process including pre-treatment, primary, secondary, and tertiary stages to ensure effluent quality. Constructed with durable materials, it is engineered for long-term reliability and strict regulatory compliance.

Technical Process

Treatment Stages

- Pre-treatment
- Primary treatment
- Secondary treatment
- Tertiary treatment

Compliance

Environmental Protection, Regulatory Compliance
