

Sewage Water Pump with 170F Engine

This sewage pump features a forced air-cooled, single-cylinder, four-stroke, 170F engine. The pump includes a solid cast iron rack shelf volute and impeller with a high-quality ceramic mechanical seal.

Product Overview

High-Performance Sewage Management

This sewage water pump is engineered for demanding wastewater applications, featuring a reliable 170F engine for consistent power. Its robust construction is specifically designed to handle solids and debris efficiently, making it ideal for agricultural, industrial, and municipal environments. The optimized flow path and impeller design maximize pumping capacity while reducing energy consumption for a cost-effective operational lifecycle.

Suction/Discharge Diameter

Technical Specifications

Core Features

- Robust solid-handling construction
- Optimized flow path design
- Energy efficient operation
- Easy maintenance access

Engine Model	170F
Suitable Applications	Sewage, Wastewater, Agricultural, Industrial, Municipal
