

Shaft Support Pillow Block

Pillow blocks support rotating shafts with compatible bearings and accessories. The housing is made of cast iron or cast steel, and they are mounted where the shaft is parallel to the mounting surface.

Product Overview

What is a Pillow Block?

A pillow block is a pedestal used to provide support for a rotating shaft with the help of compatible bearings and various accessories. These units are typically mounted where the shaft is parallel to the mounting surface. Designed for durability, the housing is constructed from robust materials like cast iron or cast steel to ensure long-term reliability in mechanical applications.

Technical Specifications

Model Identifiers

UKD • HA205

Housing Material

Cast Iron, Cast Steel

Mounting Orientation

Parallel to mounting surface
