

Shearer Flameproof Three-Phase Asynchronous Motor

This flameproof three-phase asynchronous motor is designed for hazardous environments. It is suitable for shearer applications in the mining industry, offering reliable and efficient operation.

Product Overview

High-Performance Mining Solution

The YBCS series flameproof three-phase asynchronous motor is specifically engineered for safe, high-performance operation in hazardous mining environments where flammable gases or dust are present. Featuring a robust flameproof enclosure, this motor is built to withstand extreme mechanical stress while ensuring compliance with stringent safety standards. Its reliable asynchronous design provides consistent output for demanding shearer applications, ensuring operational longevity under the most rigorous conditions.

Technical Specifications

Primary Applications

- Mining Industry
- Shearer Equipment
- Explosive Atmospheres

Motor Type	Three-phase asynchronous
Enclosure Design	Flameproof, Hazardous environment rated
