

Shearer Guide Rail for Mining Machines

These guide rails are specifically designed for use in mining machines. The rails are constructed from a durable alloy, making them suitable for harsh mining environments.

Product Overview

Robust Shearer Guide Rail

This guide rail is engineered specifically for use in comprehensive mining machinery, ensuring reliable performance in demanding underground environments. Constructed from durable cast metal, the rail features a contoured profile designed to optimize operational efficiency. Its robust build quality makes it an essential component for heavy-duty shearer machinery applications.

Technical Specifications

Weight Range

0.5 kg

Minimum Weight

100 kg

Maximum Weight

Construction Material

Cast Metal • Durable Alloy

Application

Comprehensive mining machine
