

Shearing Machine Circular Blade

Circular saw blade designed for shearing machines. It is constructed from hardened steel, ensuring durability and precise cuts.

Product Overview

High-Performance Shearing Solution

This circular blade is engineered specifically for use in professional shearing machines, ensuring reliable performance in demanding metal forming environments. Crafted from hardened steel, the blade offers exceptional durability and maintains precision during operation. Its design includes a central mounting hole and secondary bolt holes, providing a secure and stable attachment for consistent, clean, and efficient shearing results.

Technical Specifications

Mounting Configuration

- Central mounting hole
- Secondary bolt holes for secure attachment

Key Benefits

High Durability • Precision Cutting • Secure Attachment

Material

Hardened Steel

Applications

Metal forming, Industrial shearing, Precision cutting
