

Sheet Material Processing Equipment

This equipment is designed for processing sheet materials with precision. Its features include rollers, cutting mechanisms, and a control panel for operational monitoring.

Overview

Precision Sheet Processing

The RSC-60 is a robust mechanical solution engineered for high-demand industrial environments. Designed specifically for processing sheet materials like paperboard and corrugated board, it integrates advanced roller and cutting mechanisms to ensure consistent output. Its sturdy metal frame and intuitive control interface provide the stability and precision required for efficient material handling.

Technical Specifications

Model	RSC-60
Equipment Type	Mechanical Sheet Processing Equipment
Suitable Materials	Paperboard, Corrugated Board

Construction & Control

Construction

Sturdy Metal Frame • Industrial Grade

Control Interface

- Integrated control panel
- Operational buttons
- Status indicators
