

Sheet Metal Cutting and Folding Machine

This machine is used for cutting and folding sheet metal. It facilitates efficient and precise metal fabrication.

Overview

High-Efficiency Metal Processing

This automatic cutting and folding machine is designed for precision metal fabrication tasks. It streamlines production workflows by integrating cutting and folding capabilities into a single, efficient unit. Ideal for industrial workshops, this machine enhances productivity for sheet metal processing applications.

Technical Specifications

Automation

Fully Automatic

Machine Type

Automatic Cutting & Folding Machine

Core Functions

Cutting, Folding, Bending
